

# Year Five News

## News from class

As we come to the end of the first full week without you, we want you to know that we are missing you lots! I hope you have been working hard at home and helping your parents out too.

We have been studying lots of geography this week. Some of the areas we looked at were climate zones, time zones, longitude and latitude. Look out for information about this in the next learning pack. Longitude and latitude are invisible lines around the earth that allow us to locate places. We have just started a research project on our chosen country and we will be focussing on these areas of geography when we research. The countries they could choose from were Greenland, Kenya, Peru and Philippines.

## News from home

Not only can Alex's smile light up the room but now he can use a potato too! Alex has been busy creating electrical circuits involving a potato to carry the current! I remember trying to replace the battery component in a circuit with a potato but I couldn't quite get it to work, I wonder if anyone at home could? It was great to hear from Angelo too, he has been hard at work completing lots of tasks. He made a poster on how to pray the Holy Rosary and wrote numbers in Roman numerals. He has also been working on his addition and subtraction. Well done boys!

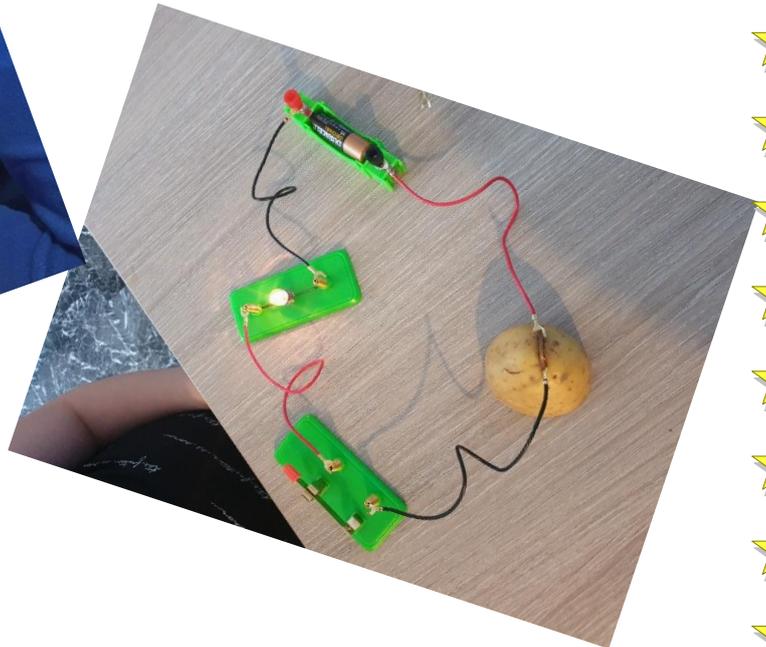

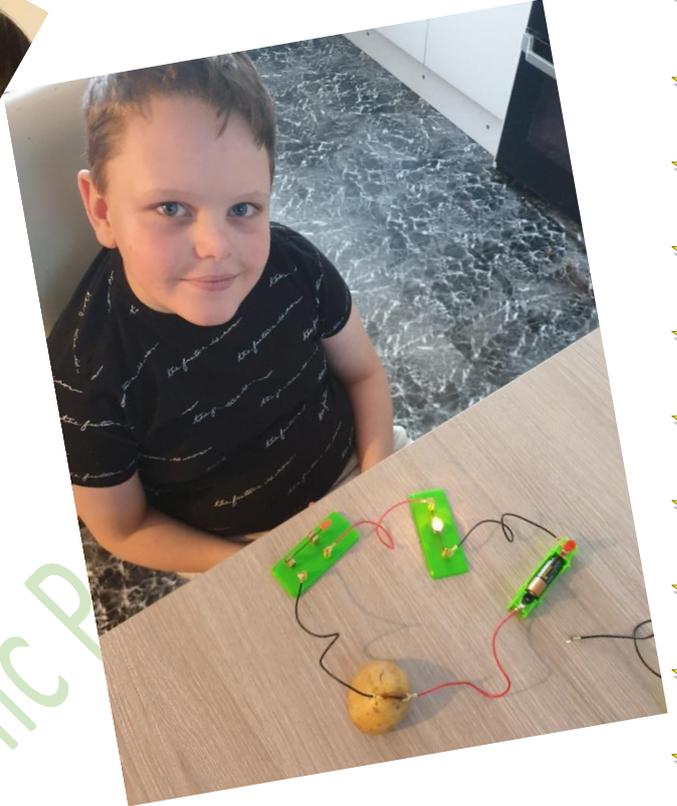

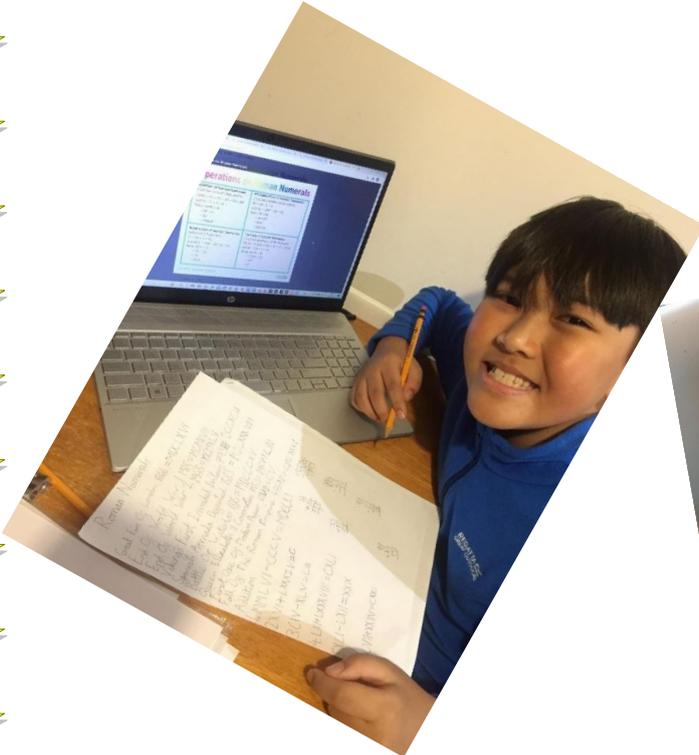

## Top Learning Tips

Reward yourself – you're working hard and putting a lot of effort into improving yourself and your studies and we think it's only right that you reward yourself. Plan in a little treat for yourself every time you complete an activity or feel completed a certain amount of study time!

Class joke

**My neighbour texted me, "I just made synonym buns!"  
I texted back, "You mean like grammar use to make?" I haven't heard from her since.**
